# **Reinterpret Types**

#### 1 INTRO

Here is a formalization of our type system.

### 2 CORE LANGUAGE

First, we'll define a small core language with basic integers, booleans, and functions.

```
\begin{array}{llll} e & ::= & \mathbb{Z} \mid \mathbb{B} \mid x \mid \text{fun } x \rightarrow e \mid e \; e & expressions \\ x & ::= & (identifiers) & variables \\ v & ::= & \mathbb{Z} \mid \mathbb{B} \mid \text{fun } x \rightarrow e \mid x & values \\ \tau & ::= & \text{int} \mid \text{bool} \mid \tau \rightarrow \tau & types \end{array}
```

Fig. 1. Core language grammar

The typing rules of the system is defined as following:

Definition 2.1 (Typing rules).

- (1)  $\models e : \text{int iff } e \Longrightarrow v, v \in \mathbb{Z}.$
- (2)  $\models e : \text{bool iff } e \Longrightarrow v, v \in \mathbb{B}.$
- (3)  $\models e : \tau_1 \rightarrow \tau_2 \text{ iff } \forall v \text{ such that } \models v : \tau_1, \models e v : \tau_2.$

#### 3 LANGUAGE EXTENSIONS

Next, we will define a couple of languages extensions and their corresponding typing rules.

```
\begin{array}{lll} e & ::= & \cdots \mid a & expressions \\ v & ::= & \cdots \mid a & values \\ \tau & ::= & \cdots \mid \alpha \mid \tau \cup \tau \mid \tau \cap \tau \mid \{\tau \mid e\} \mid (x:\tau) \rightarrow \tau \mid \mu\alpha.\tau & types \end{array}
```

Fig. 2. Extended language grammar

Definition 3.1 (More typing rules).

- (1)  $\models e : \alpha \text{ iff } e \Longrightarrow a$ , where  $\texttt{TYPEOF}(a) = \alpha$ .
- (2)  $\models e : \tau_1 \cup \tau_2 \text{ iff } \models e : \tau_1 \text{ or } \models e : \tau_2.$
- (3)  $\models e : \tau_1 \cap \tau_2 \text{ iff } \models e : \tau_1 \text{ and } \models e : \tau_2.$
- (4)  $\models e : \{\tau \mid p\} \text{ iff } \models e : \tau \text{ and } p e \Longrightarrow \mathsf{true}.$
- (5)  $\models e : (x : \tau_1) \rightarrow \tau_2 \text{ iff } \forall v \text{ such that } \models v : \tau_1, \models e v : \tau_2[v/x].$
- (6)  $\models e : \mu \alpha. \tau \text{ iff } ?.$

We will now extend the language with records.

$$\begin{array}{lll} e & ::= & \cdots \mid \{\overline{\ell = e}\}^{\{\overline{\ell}\}} \mid e.\ell & expressions \\ v & ::= & \cdots \mid \{\overline{\ell = v}\}^{\{\overline{\ell}\}} & values \\ \tau & ::= & \cdots \mid \{\overline{\ell : \tau}\} & types \end{array}$$

Fig. 3. Extended language grammar (with records)

Definition 3.2 (Record typing rules).

```
(1) \models e : \{\ell_1 : \tau_1, \dots, \ell_m : \tau_m\} iff e \Longrightarrow \{\ell_1 = v_1, \dots, \ell_m = v_m, \dots, \ell_n = v_n\}^{\{\ell_1, \dots, \ell_p\}} where \models v_i : \tau_i for i \in \{1, \dots, m\}, n \ge p \ge m.
```

## 4 TYPE AS VALUES

In this section, we will demonstrate how to represent each type using a tuple of functions generator and checker.

Definition 4.1 (Semantic interpretation of types). We define the semantic interpretation of types as  $\llbracket \tau \rrbracket$ , where  $\llbracket \tau \rrbracket = \langle \text{generator}(\tau), \text{checker}(\tau, e) \rangle$ .

Definition 4.2 (Defining Generator in the core language).

- (1) generator(int): pick  $n \in \mathbb{Z}$ .
- (2) generator(bool): pick  $b \in \mathbb{B}$ .
- (3) generator( $\tau_1 \rightarrow \tau_2$ ): fun  $x \rightarrow$  generator( $\tau_2$ ).

Definition 4.3 (Defining Checker in the core language).

- (1)  $checker(int, e) : e \sim int.$
- (2)  $checker(bool, e) : e \sim bool.$
- (3) checker( $\tau_1 \rightarrow \tau_2, e$ ): let arg = generator( $\tau_1$ ) in checker( $\tau_2$ , (e arg)).

Definition 4.4 (Defining Generator in the extended language).

- (1) generator( $\alpha_i$ ):  $a_i$ .
- (2) generator( $\tau_1 \cup \tau_2$ ): pick  $b \in \mathbb{B}$ . if b then generator( $\tau_1$ ) else generator( $\tau_2$ ).
- (3) generator( $\tau_1 \cap \tau_2$ ) where  $\tau_1, \tau_2$  are not arrow types: pick  $b \in \mathbb{B}$ . if b then let gend = generator( $\tau_1$ ) in take(checker( $\tau_2$ , gend), gend) else let gend = generator( $\tau_2$ ) in take(checker( $\tau_1$ , gend), gend).
- (4) generator( $\tau_1 \cap \tau_2$ ) where  $\tau_1 = \tau_{dom1} \rightarrow \tau_{cod1}$ ,  $\tau_2 = \tau_{dom2} \rightarrow \tau_{cod2}$ : fun  $x \rightarrow$  if checker( $\tau_{dom1}, x$ ) then generator( $\tau_{cod1}$ ) else generator( $\tau_{cod2}$ ).
- (5) generator( $\tau_1 \cap \tau_2$ ) where

```
\tau_{1} = \{\ell_{1} : \tau'_{1}, \cdots, \ell_{m} : \tau'_{m}\}, \tau_{2} = \{\ell_{1} : \tau''_{1}, \cdots, \ell_{m} : \tau''_{m}, \cdots, \ell_{n} : \tau''_{n}\}: \{\ell_{1} = \operatorname{generator}(\tau'_{1} \cap \tau''_{1}), \ell_{m} = \operatorname{generator}(\tau'_{m} \cap \tau''_{m}), \cdots, \ell_{n} = \}.
```

- (6) generator( $\{\tau \mid p\}$ ): let choice = generator( $\tau$ ) in take(p, choice).
- (7) generator( $(x : \tau_1) \rightarrow \tau_2$ ): let  $\tau'_2$  = fun  $x \rightarrow \tau_2$  in fun  $x' \rightarrow$  if checker( $\tau_1, x'$ ) then generator( $\tau'_2, x'$ ) else  $TYPE\_ERROR$ .
- (8) generator( $\mu\alpha.\tau$ ): generator( $\tau[\alpha/\mu\alpha.\tau]$ ).
- (9) generator( $\{\ell_1: \tau_1, \cdots, \ell_n: \tau_n\}$ ): let  $v_1 = \operatorname{generator}(\tau_1)$  in  $\cdots$  let  $v_n = \operatorname{generator}(\tau_n)$  in  $\{\ell_1 = v_1, \cdots, \ell_n = v_n\}$ .

Definition 4.5 (Defining Checker in the extended language).

- (1) checker( $\alpha_i$ , e):  $e \sim a_i$ .
- (2) checker( $\tau_1 \cup \tau_2, e$ ) : checker( $\tau_1, e$ ) or checker( $\tau_2, e$ ).
- (3)  $checker(\tau_1 \cap \tau_2, e) : checker(\tau_1, e)$  and  $checker(\tau_2, e)$ .
- (4)  $checker(\{\tau \mid p\}, e) : checker(\tau, e) \text{ and } eval(e) = true.$
- (5) checker( $(x:\tau_1) \rightarrow \tau_2, e$ ): let arg = generator( $\tau_1$ ) in checker( $\tau_2[arg/x]$ , (e arg)).
- (6) checker( $\mu\alpha.\tau, e$ ) : checker( $\tau[\mu\alpha.\tau/\alpha], e$ ).
- (7)  $\operatorname{checker}(\{\ell_1:\tau_1,\cdots,\ell_m:\tau_m\},e):\operatorname{eval}(e)=\{\ell_1=v_1,\cdots,\ell_m=v_m,\cdots,\ell_n=v_n\}^{\{\ell_1,\cdots,\ell_m\}}$  and  $\operatorname{checker}(\tau_1,v_1)\cdots$  and  $\operatorname{checker}(\tau_m,v_m)$ .
